6 TIPS TO PROTECT YOUR PIN

ATMs remain the most convenient way to access your money. Through the Kenya Bankers Association, banks are working to make ATMs safer. Here are 6 tips that can help you ensure that your PIN is safe:

- 1** When entering your PIN at the ATM always shield the numbers with your hands.
- 2** Avoid noting your PIN on your phone or keeping it in your wallet.
- 3** Do not give out your PIN, card number or account number to anyone including relatives or friends.
- 4** Only enter your PIN when prompted to do so by the ATM.
- 5** If the machine retains your card, do not leave the ATM site without notifying your bank.
- 6** Never accept help from a stranger; call your bank.

Banks work to ensure that your hard earned money is safe, therefore should you see anything suspicious at the ATM please contact your bank directly.
